PROFESSIONAL SUMMARY

A seasoned and result-oriented Software Engineer bringing almost 3 years of hands-on experience in the Guidewire Policy Center Configuration. Proficient in writing efficient Gosu script, interface configuration using PCF, and executing Platform Upgrades. Adept at performing accurate estimation of work products and bridging the gap between business requirements and technical solutions. Strong communicator with the flexibility to adapt innovative technical solutions to complex business domains.

WORK EXPERIENCE

PricewaterhouseCoopers(PWC)

Associate 2 2026 – Present

- Experienced in Guidewire Policy Center development and configuration.
- Proficient in **Gosu programming** and **PCF configuration** for UI customization.
- Familiar with **Commercial Auto insurance** policy lifecycle and related configurations.
- Skilled in debugging, troubleshooting, enhancements, and defect resolution.
- Worked on **Guidewire messaging components** to enable seamless asynchronous communication between systems, utilizing message queues, XML payloads, and event-driven processing to ensure reliable data exchange with external systems.
- **Data Migration:** Worked on Guidewire data migration activities, including data mapping, transformation, validation, and loading to ensure accurate and consistent data transfer between systems.

ERNST & YOUNG(EY GDS) 2024 – 2026

Associate Software Engineer

- He has worked as a Policy Center Developer in Guidewire PC Project, involved mainly in enhancement and addition of new features.
- He has been involved in writing and configuring business UW rules using GOSU and interface configuration using PCF.
- He has a good knowledge in P&C Insurance.
- Focused on resolving production issues by analysing the problem statements and replicating issues in the UAT environment to identify root cause.
- Configuration & Logic: Designed and developed core PolicyCenter functionalities, utilizing Gosu to write complex business rules, validation logic, and enhancement scripts.
- Integration Development: Designed and implemented Guidewire Integration Components, utilizing XML payloads and Web Services to ensure seamless data exchange with external systems.
- Collaborated with functional leads to analyze business requirements and provided accurate estimation of work products for assigned user stories.
- Production Support: Root cause analysis for production incidents; executed Gosu scripts to pinpoint failure points in live transactions and applied technical solutions to prevent recurrence.
- Demonstrated strong interpersonal and communication skills by delivering technical demos to business stakeholders and testing teams to ensure functional alignment.

HIGHRADIUS CORPORATION (HRC) January 2022

• Developed an AI enabled B2B Invoice management system using Java as backend ,automating processing for 50000+ invoices and reducing manual workload.

Responsibilities

- Involved in implementation of complex Story Cards, critical modules involving technical challenges.
- Responsible for requirement analysis, design and development of projects.
